

Environmental Policy

GREEN
FURNITURE
CONCEPT

Green Furniture Concept was founded to be the conscious choice for sustainable furniture design and development. Environmental, economic, and social sustainability guide our development and are part of our soul as a company. As such, we commit to integrating these three sustainability parts into our business processes and continuous improvement of our environmental management.

We have an established plan to prevent the use of substances harmful to the environment and/or human health and promote the use of natural materials. We embed sustainable values from the drawing table onward to create products that are safe for people and the planet. Complying with applicable laws and applying the precautionary principle is, of course, always a minimum requirement, and through the use of certifications and eco-labels, we set a baseline for our sustainability work. We always strive to go beyond our baseline.

We recognise the importance of considering the full life cycle of products and their materials. As such, we strive to apply circular economy principles in all aspects of what we do. We always try to find solutions to integrate the concept of material cycles into our product design and material selection. We aim for our products to be in use for as long as possible and that they become resources, not waste, at the end of their useful life.

Taking into consideration that the sustainability field is in rapid development, we aim to continuously make our products and processes more sustainable as new possibilities materialise. To support continuous improvement, we strive to measure and evaluate the impacts throughout the full lifecycle of products and their materials.

We understand the importance of education and raising awareness of sustainable design. We promote up-to-date environmental consciousness and knowledge amongst the company's staff as well as with architects, our clients and suppliers. We also give lectures on sustainable design to students, designers and policymakers. To foster close relationships and transparency in our supply chain, we prioritise working with local suppliers who align with our values and commitment to sustainability.
